# Download

To download Random 10k Generator, **go to [www.kalif.ca/tmp/random10k/](http://www.kalif.ca/tmp/random10k/)** and **click Download Now (it's free)**. **Save the program to your Desktop** or another place that you prefer.

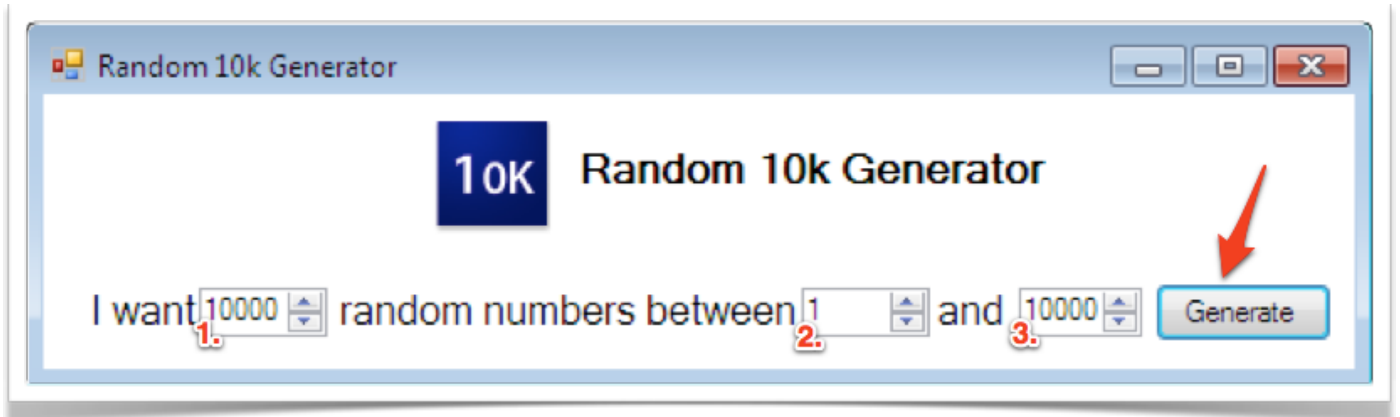

If you wish to access the source code, **click Get Source Code** from the above page.

# Installation

There is no installation required! Just save the program to your Desktop or another folder that you prefer. To run it, **double click on the icon.**

# First Look

This is how Random 10k Generator looks like when you first run it:

To use it, **set the number box labeled “1”** to the list size you want.

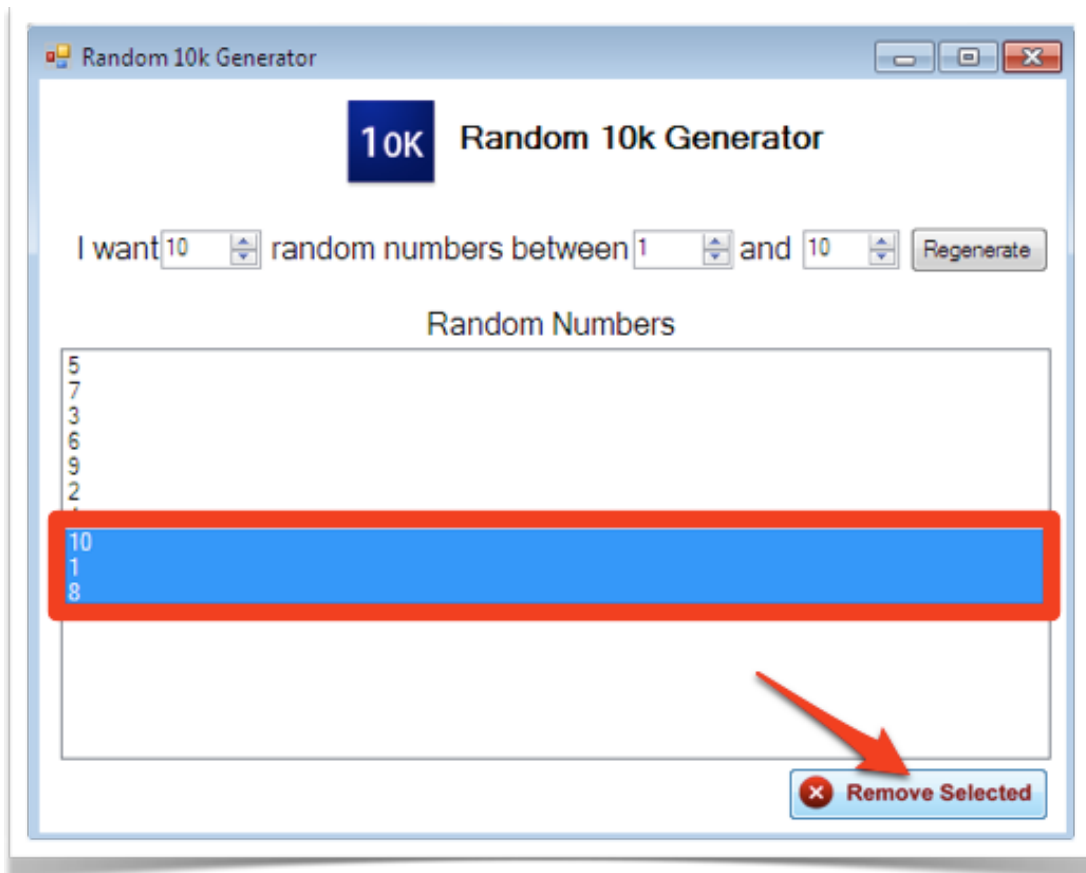

Then decide the range you would like the random numbers to be in. **Set the number box labeled “2”** to the lowest random number you want and **set the number box labeled “3”** to the highest random number you want.

Note: The minimum for each number box is 1 and the maximum 10,000.

Once, you’ve set the three number boxes, **click Generate** to generate the random numbers. It may take a few seconds to complete, if you need a large set of random numbers.

If possible, Random 10k Generator generates unique numbers, otherwise some numbers will repeat.

# Managing the List

Once the list is generated, you can **manage it using the scroller bar**, if the list is big enough. If there are number(s) in the list that you don't want, you can **remove them using the Remove Selected button**.
